What is the ocean twilight zone?

What is the ocean twilight zone?

What is the ocean twilight zone?

NEWS • 27 FEBRUARY 2020

Enter the twilight zone: scientists dive into the oceans' mysterious middle

The vast, wild depths between light and shadow face increasing threats from climate change and overfishing.

Jeff Tollefson

Although thought to be the most abundant vertebrates on Earth, little is known about the species of bristlemouths that inhabit the oceans' twilight zone. Credit: Solvin Zankl/NPL

The oceans' twilight zone must be studied now, before it is too late

Exploitation and degradation of the mysterious layer between the sunlit ocean surface and the abyss jeopardize fish stocks and the climate.

What is the ocean twilight zone?

- Bioluminescent capability**
- non-bioluminescent
 - unlikely
 - undefined
 - likely
 - bioluminescent

Why studying mesopelagic ecosystems?

Why studying mesopelagic ecosystems?

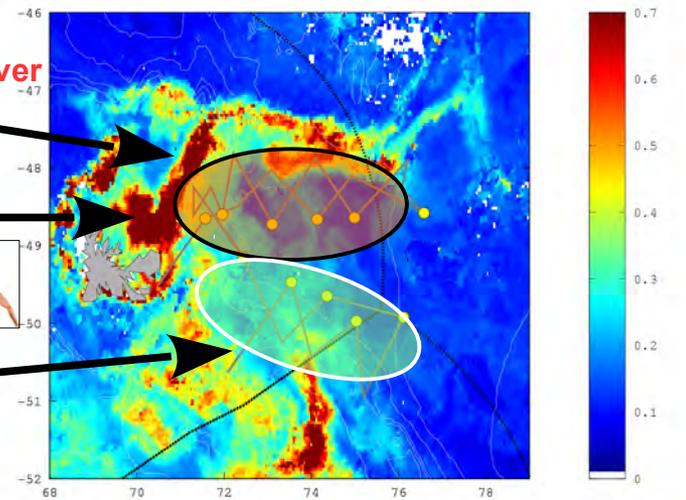

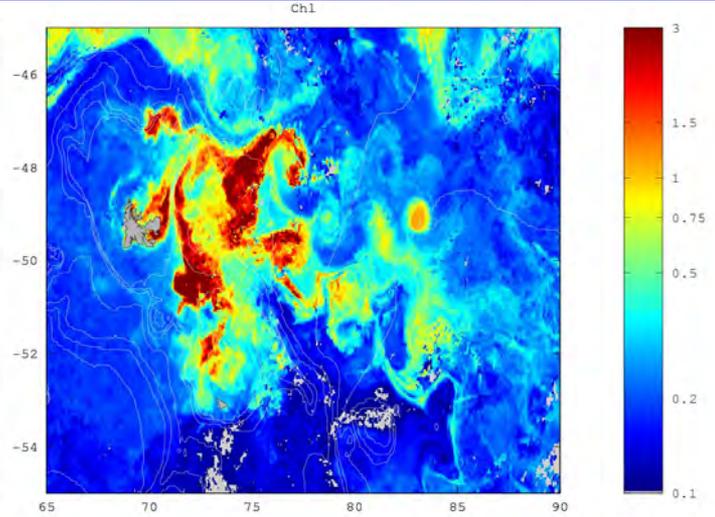

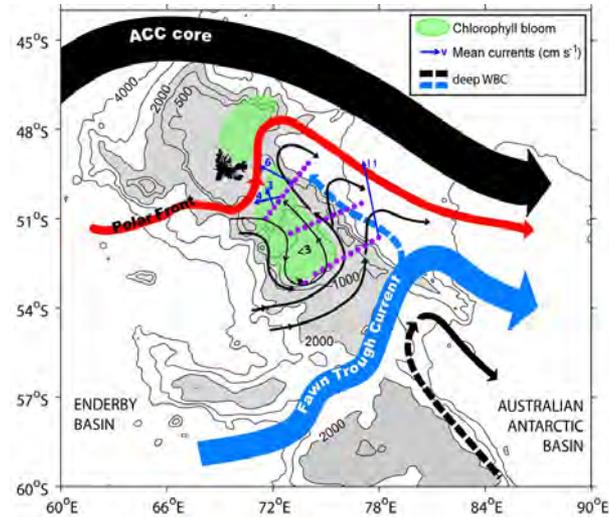

- 1 The distribution of biomass and biodiversity of mesopelagics
- 2 Food web linkages within the twilight zone and with producers and top predators
- 3 Structuring of mesopelagics by the physical forcing
- 4 The role of the mesopelagic in the carbon cycle

Kerguelen ecosystem from carbon to top predators

Physical/biogeochemical variability

Distribution/behavior of top predators

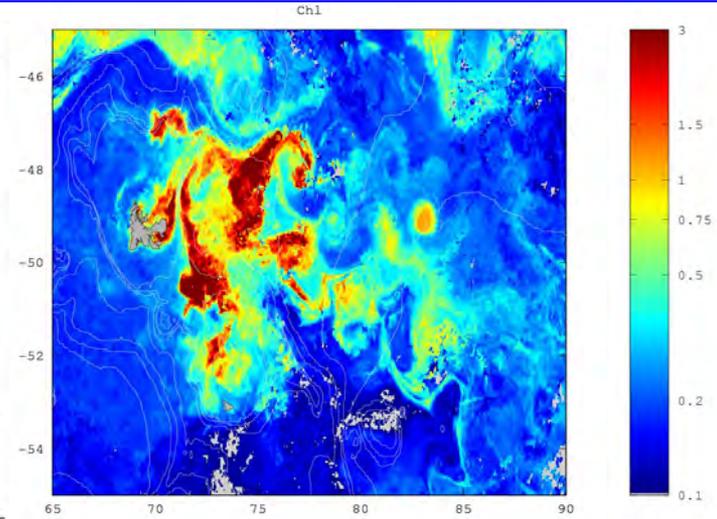

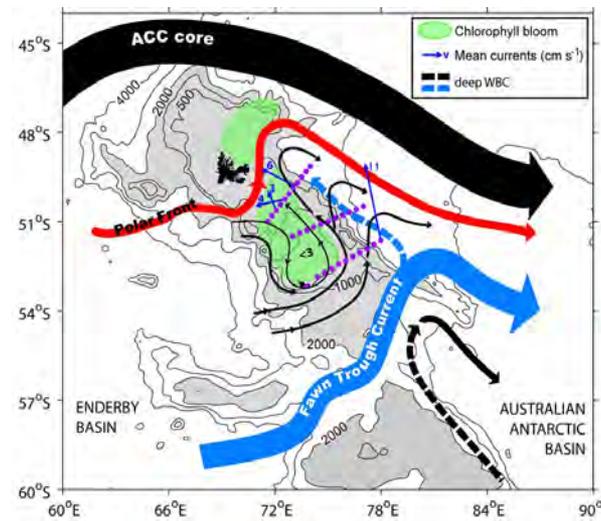

Kerguelen ecosystem from carbon to top predators

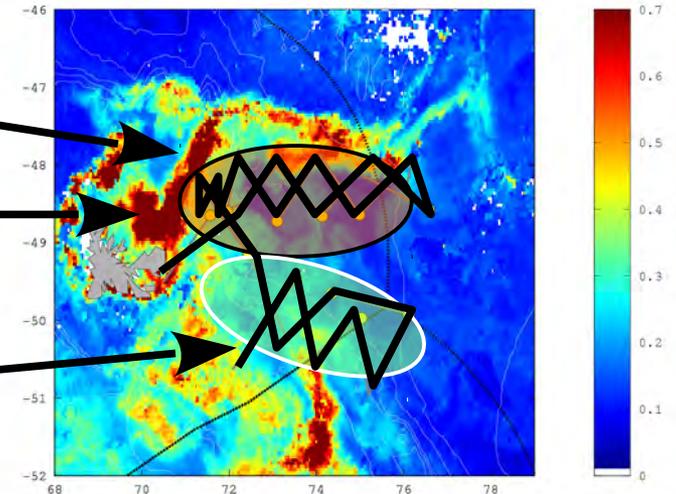

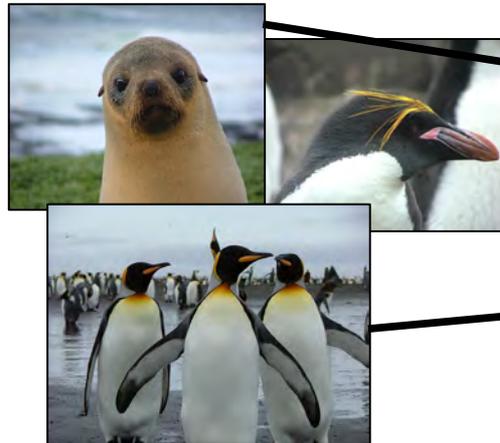

Physical/biogeochemical variability

MyctO-3D-MAP
Intermediate trophic levels

Distribution/behavior of top predators

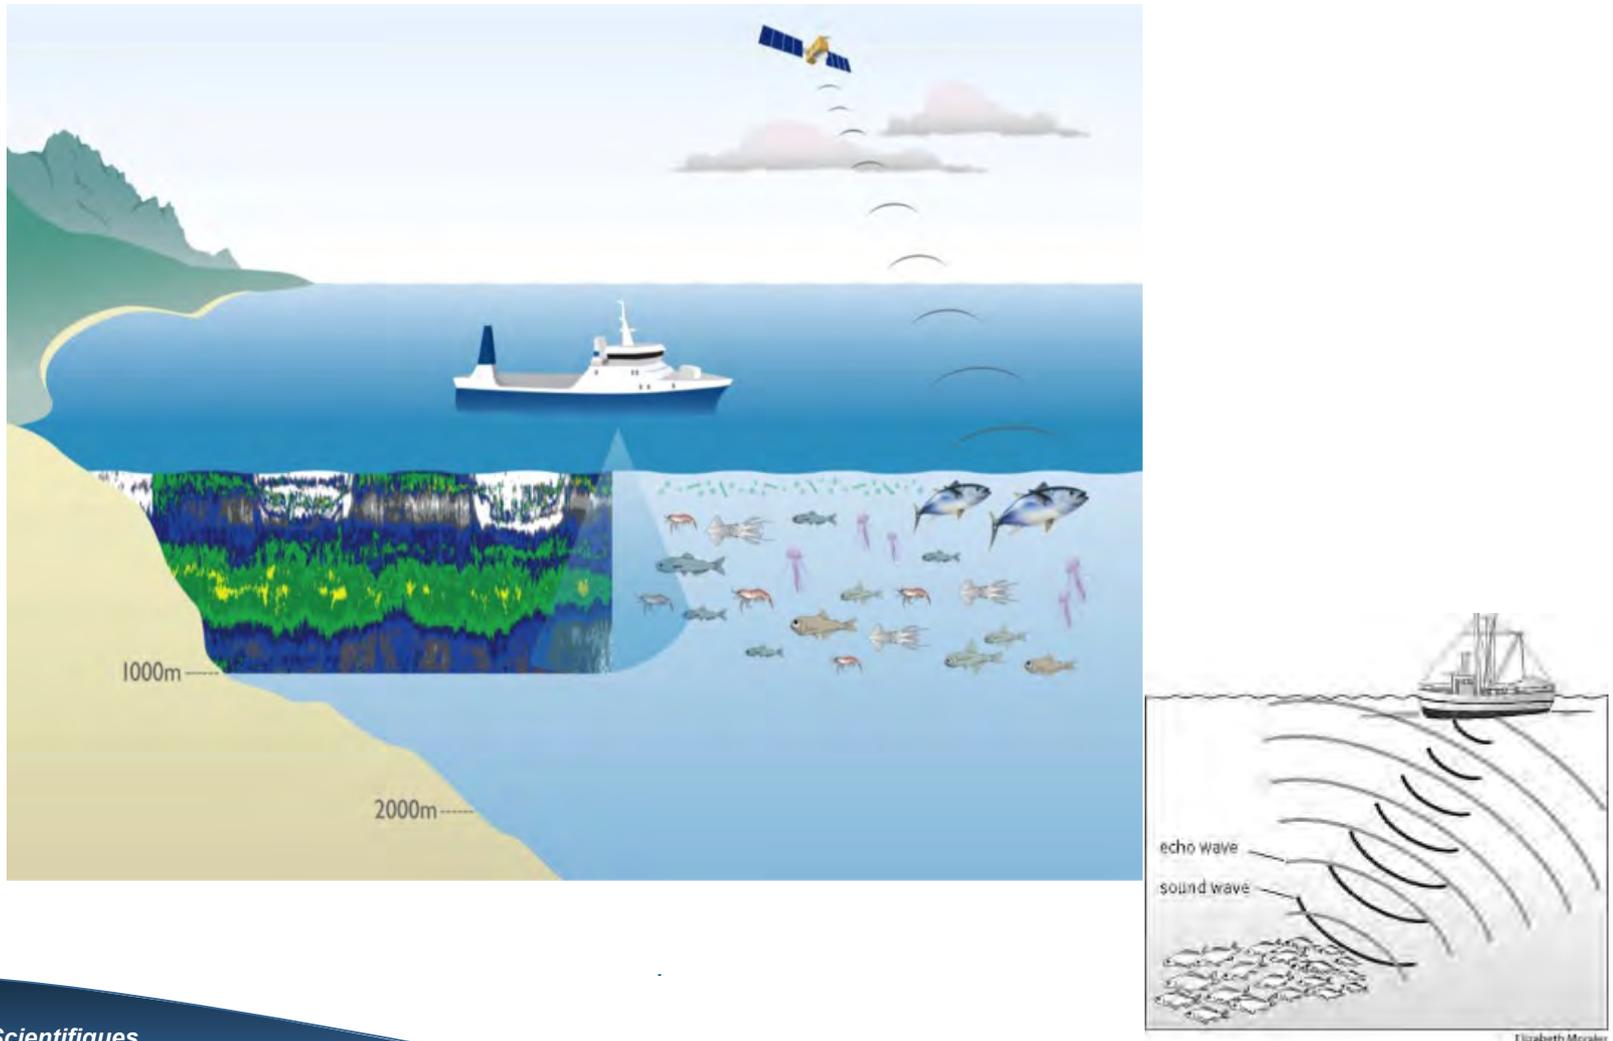

Myctophid assessment in relation to Oceanographic conditions: a three Dimension Density Distribution approach combining Modelling-, Acoustic- and Predators' data

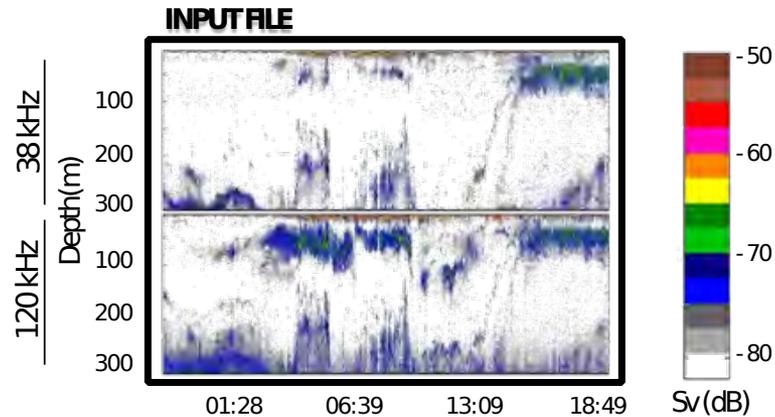

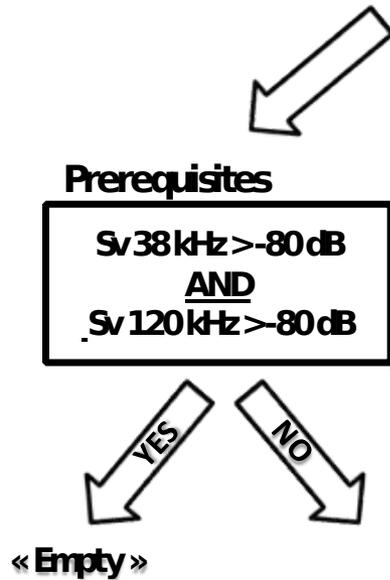

MyctO data and methods

Active acoustic: a powerful approach to estimate distribution and densities of organisms from zooplankton to top predators

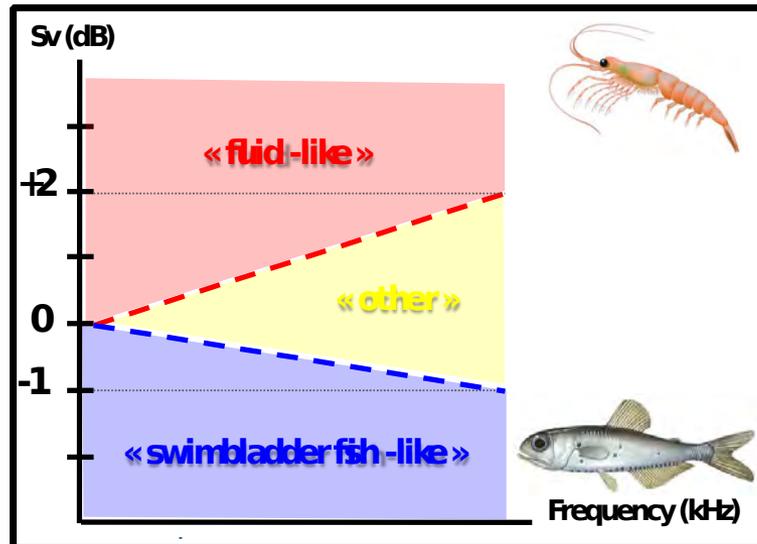

MyctO data and methods

Echosounding (EK60):
Bi-frequency method

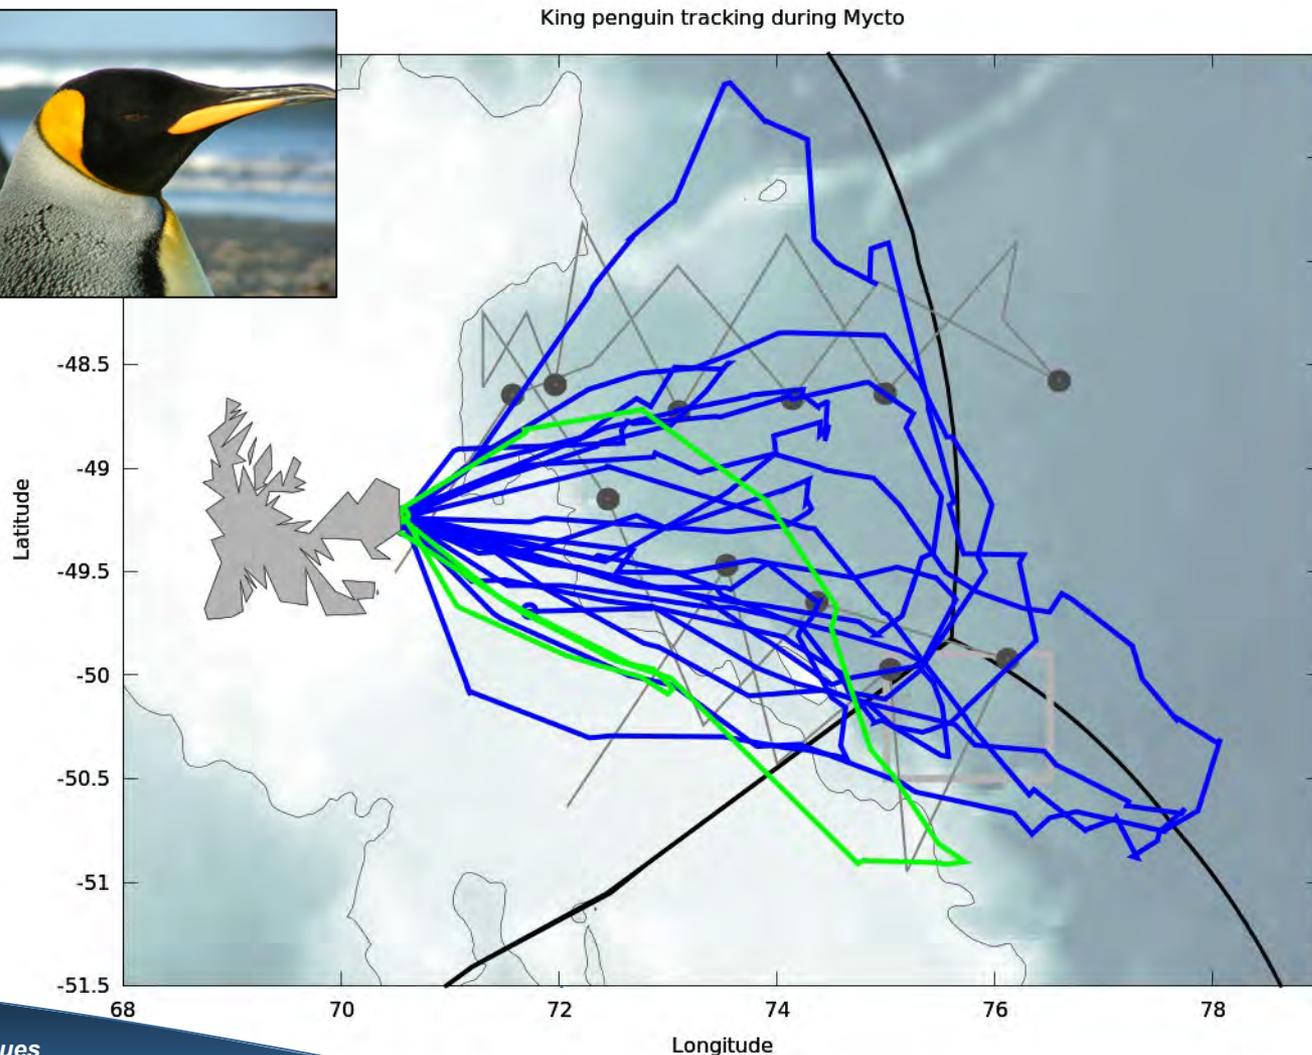

Difference $Sv_{120\text{ kHz}} - Sv_{38\text{ kHz}}$

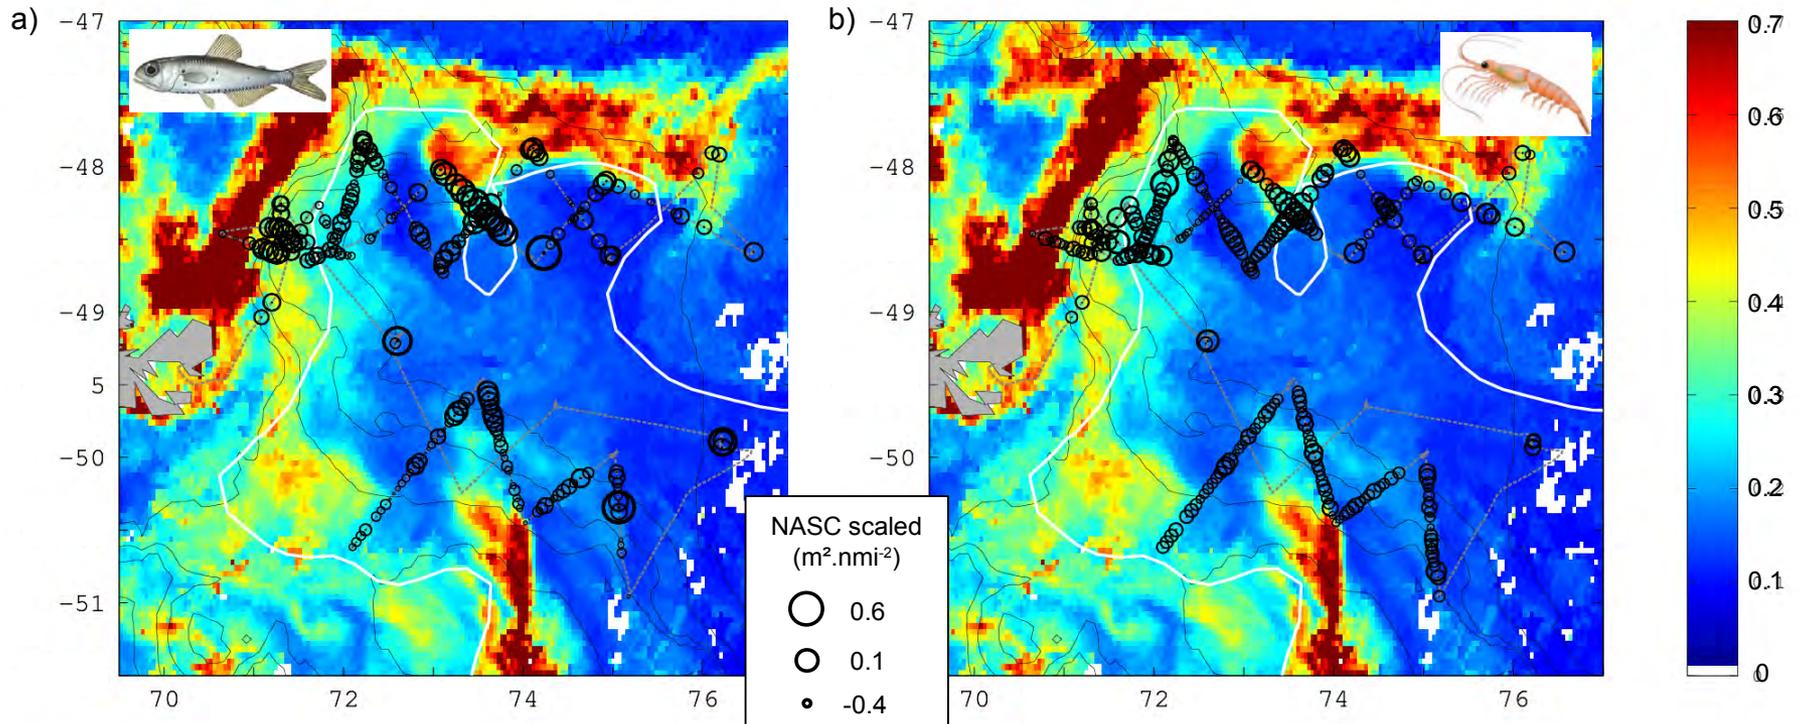

MyctO data and methods

Survey design adjusted in real-time using the simultaneous satellite tracking of king penguins

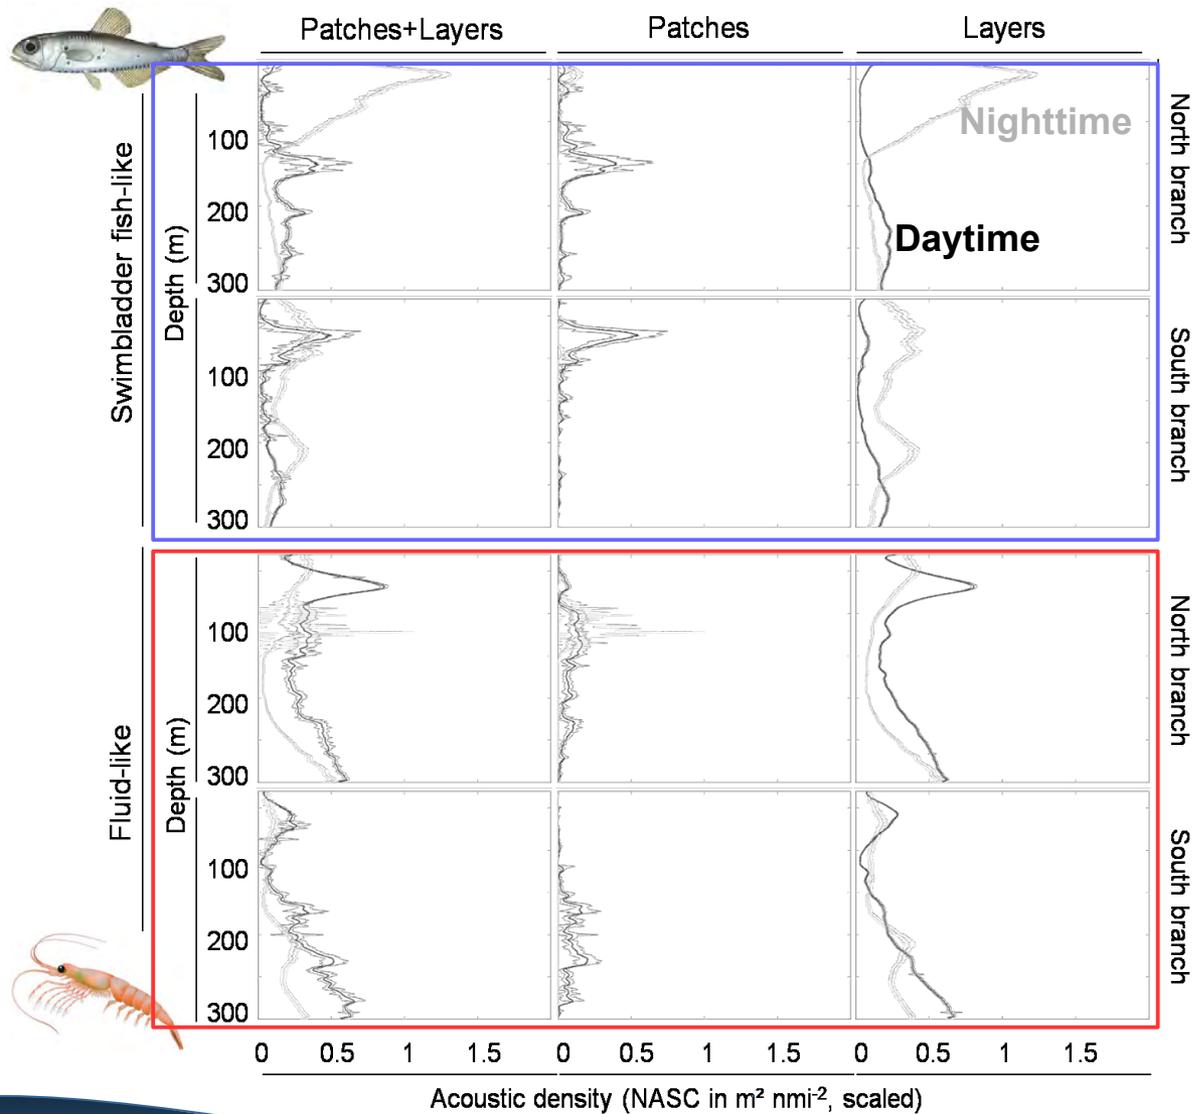

Distribution of micronekton

Heterogeneous total distribution (higher density in the north area), but differences according the structuring

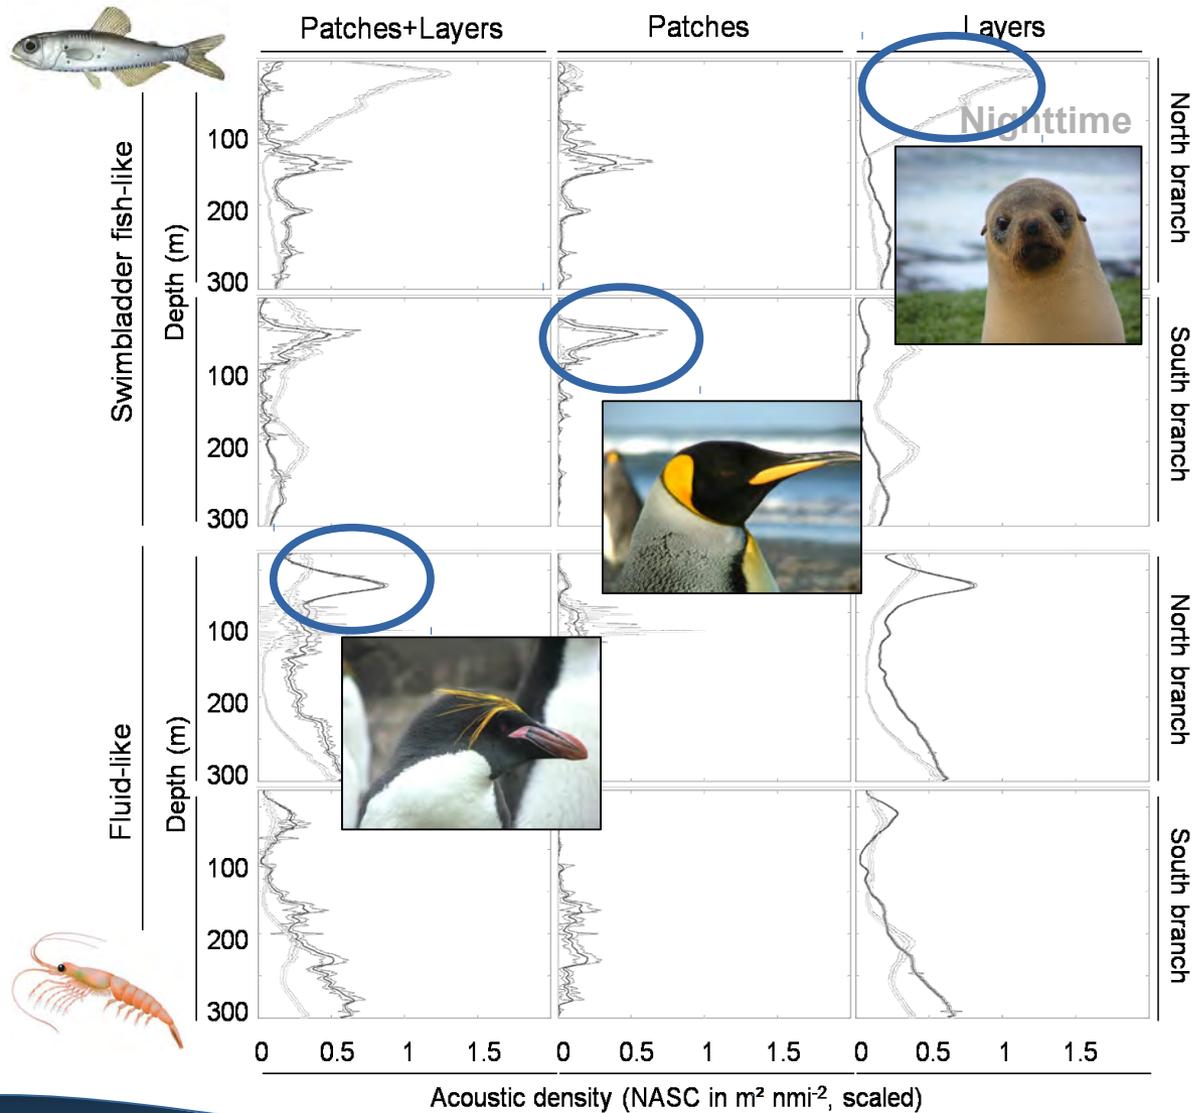

Distribution of micronekton

Contrasted vertical distribution according:

- Area
- Dial cycle

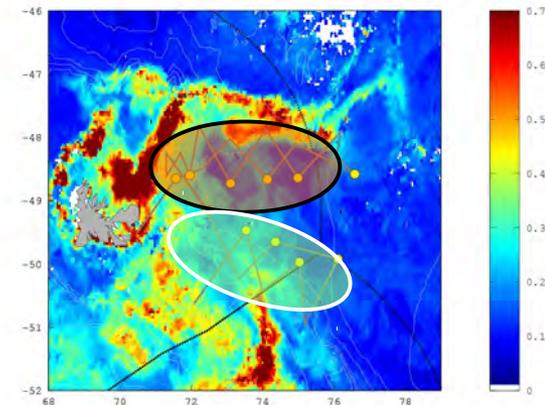

Distribution of micronekton

Contrasted vertical distribution according:

- Area
- Dial cycle

Coherent prey availability with the ecology and diving activity of each predator

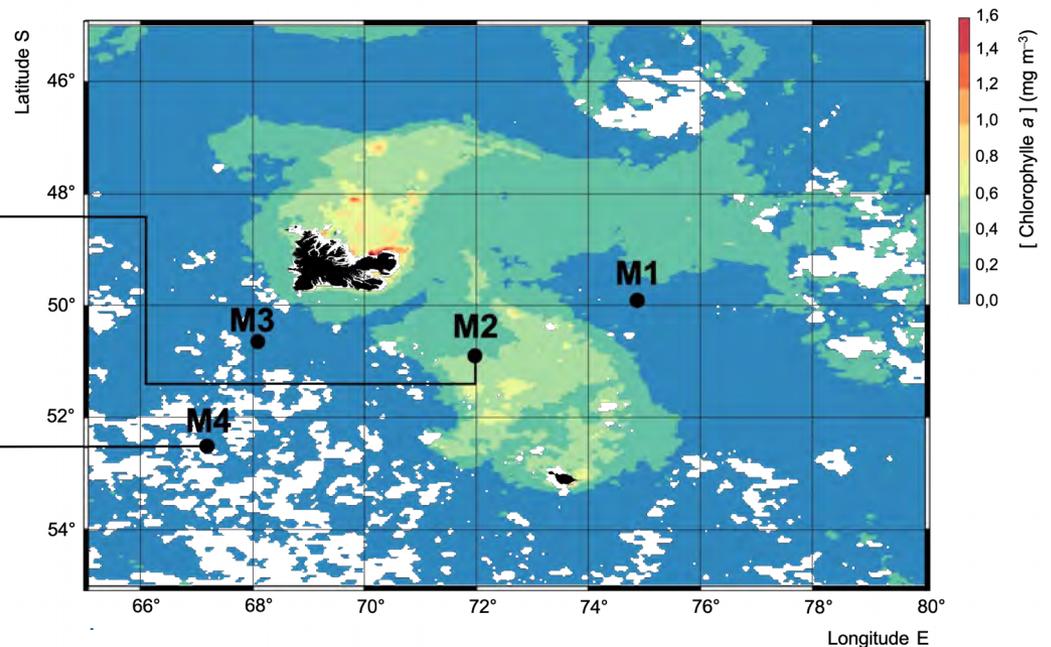

Biodiversity and carbon pump

The MOBYDICK program describe the biological diversity and associated C flows of entire food webs at contrasting sites of the SO in the Kerguelen region. From this information, we will extract synthetic descriptors of biodiversity in relation to the functioning of the biological pump

**'High Biomass Low Export'
(HBLE) ecosystem**

**'Low Biomass Low Export'
(LBLE) ecosystem**

MESOPP

MESOPP (Mesopelagic Southern Ocean Prey and Predators) was proposed to create a first collaborative network between European and Australian research teams/institutes to establish standard methods and datasets to understand, model and estimate the biomass and dynamics of mesopelagic organisms in the Southern Ocean

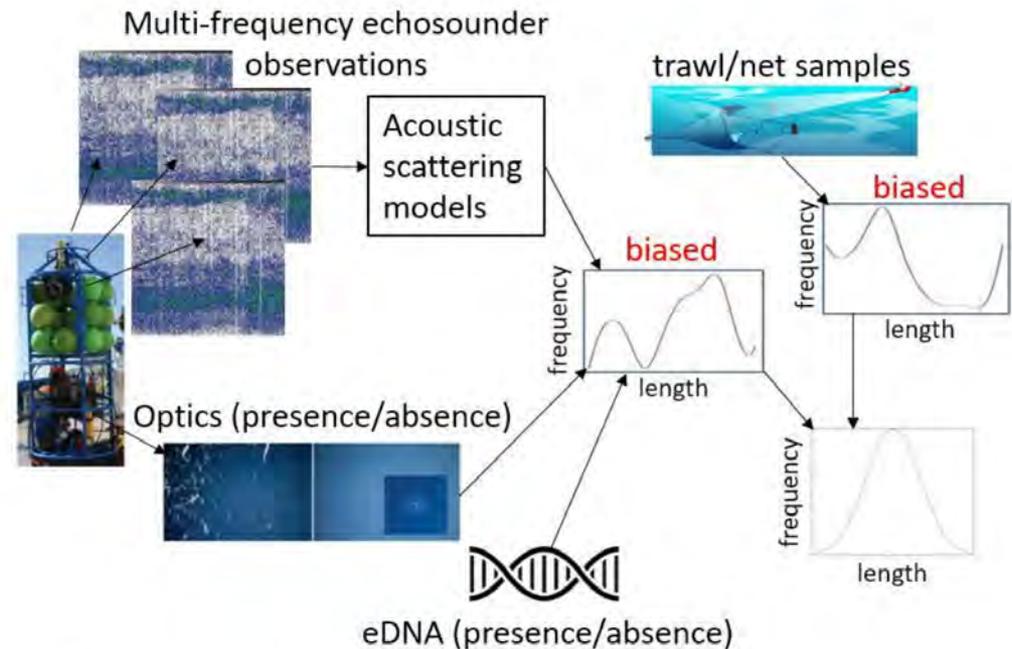

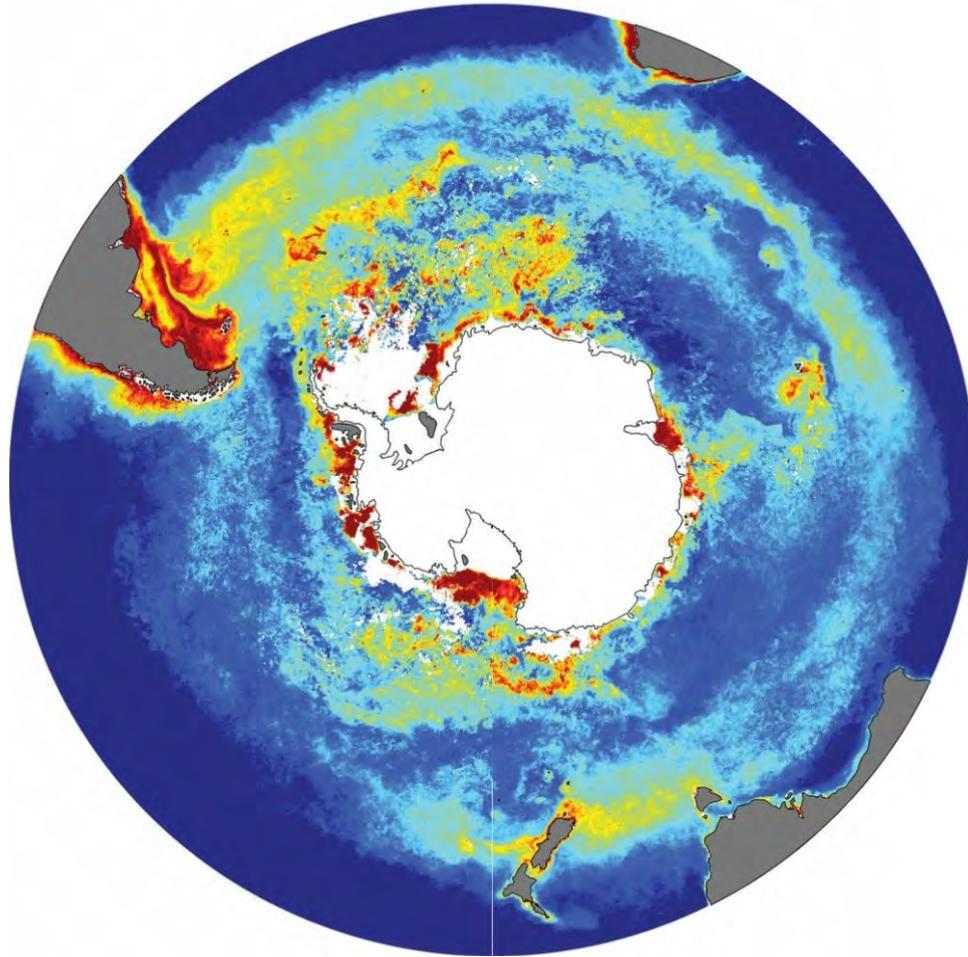

Figure 1: Quantitative biomass estimates of mesopelagic groups require to combine multi-observation systems.
